

# Introduction

Hi, I'm Ahmed Nuaman, a first-class degree graduate from *Ravensbourne College of Design and Communication*.

**I have a passion for producing simple ideas and solutions for problems laid out by briefs.** I am interested in creating rich applications and interactions that embrace the end users' needs but doesn't overwhelm them with complexity. I believe in keeping things simple, not making the user think, and fulfilling the brief beyond the clients' expectations – not giving the client what they wanted but *what they never deemed possible*.

**My work experience ranges from creating Mac and Yahoo! widgets and microsites to fully fledged e-commerce applications, innovative fund-raising platforms – all with 3Dsecure integration, customer relationship suites, and content management system.** My skills range includes expert programming knowledge of PHP, JavaScript, XML (+XSL/T), HTML, CSS, SQL, Actionscript 3; and proficient knowledge of Flex framework, ASP (+.NET) (C#), Ruby, Python, and Perl. I confidently work with a range of software suites including the Adobe Creative Suite (3) and open source alternatives such as GIMP, Inkscape, Nvu, Textwrangler, and of course, good old TextEdit.

**I have a strong work ethic and believe that nothing is impossible; all of the work I produce houses nothing but my full expertise and passion.**
